

The CO₂ Hoax

Those that do not read history are destined to repeat history.

Salem Witches

The Salem witch trials and executions came about as the result of a combination of church politics, family feuds, and hysterical children, all of which unfolded in a vacuum of **political authority**.

The earth is flat or the sun rotates around the earth

Chicken Little believes the sky is falling when an acorn falls on his head. Chicken Little decides to tell the king and, on his journey he meets other animals which join in the quest.

The Sky is Falling: The evidence is clear: the time for action is now. By 2030 almost all countries will experience “extreme weather and the ice caps will be melting. The sea level will rise putting millions of people around the world in peril.

What are the facts!

Everyone can agree on two things:

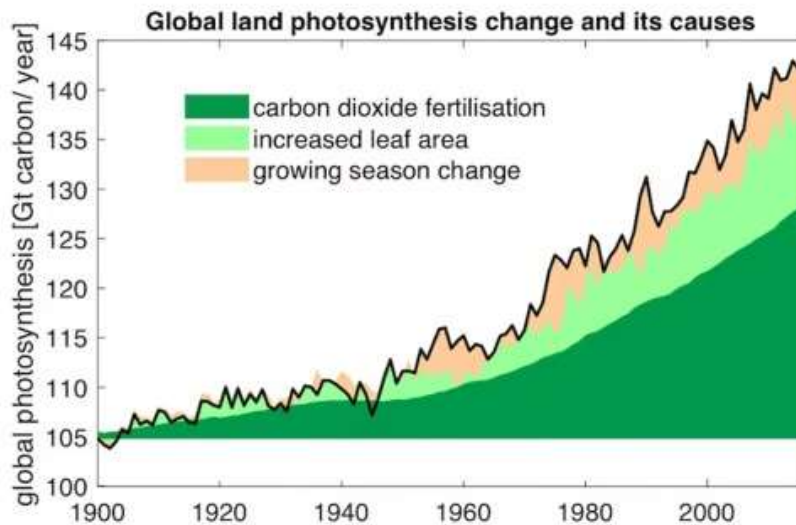

1. The climate is changing
2. CO₂ in the atmosphere is increasing

What everyone cannot agree on:

1. CO₂ is a pollutant
2. CO₂ is not a pollutant. If there was no CO₂ in the atmosphere all plant life would die and therefore no animals and we would not exist.

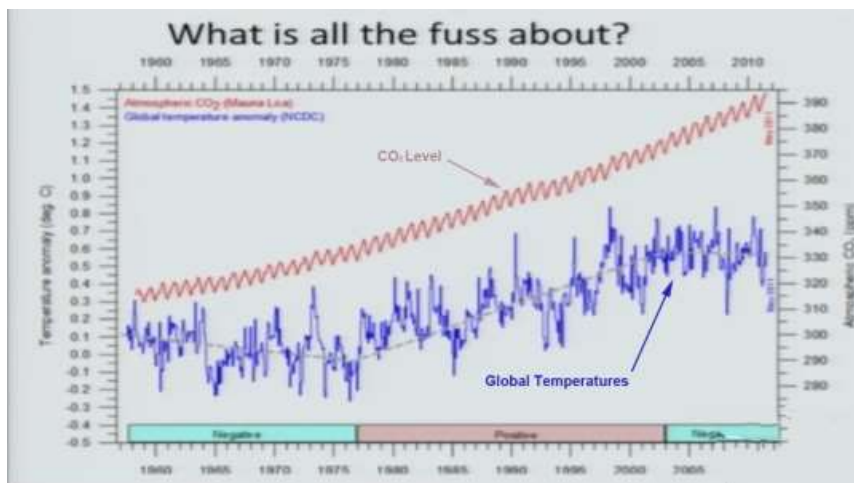

We are at a point of no return for the planet

1. Doubling of CO₂ will cause the extinction of species, the ice caps to melt and the rise of the oceans, threatening millions of people around the world.
2. Doubling of CO₂ will cause the greening of the earth, enabling the feeding of a growing earth's population. In the past CO₂ levels were higher than they are today.

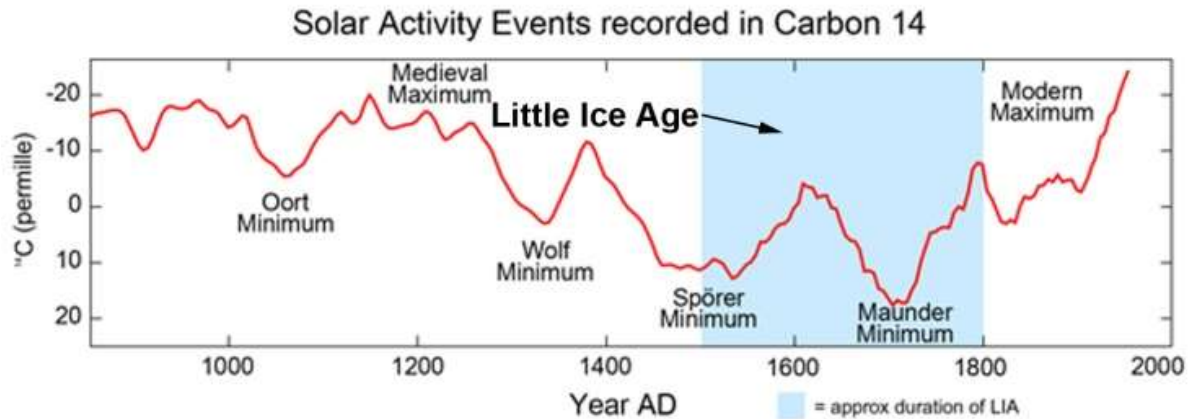

The earth's temperature is rising

1. Temperature sensors around the world have shown a marked increase that directly corresponds to the increase in CO₂ since 1970.
2. The majority of sensor locations are in urban and populated areas, which normally shows a rise in temperature over ambient earth temperatures. When these sensors are not included, there is no rise in the historical average of earth's temperature. In fact Global temperatures are going down even with the rise of CO₂.

We must stop using fossil fuels

1. The burning of fossil fuels are the main source of the increase in CO₂ and the prime cause of climate change.
2. The prime cause of climate change is the sun and water vapor (clouds) which are not clearly understood or modeled and therefore ignored. CO₂ is a minor contributor.

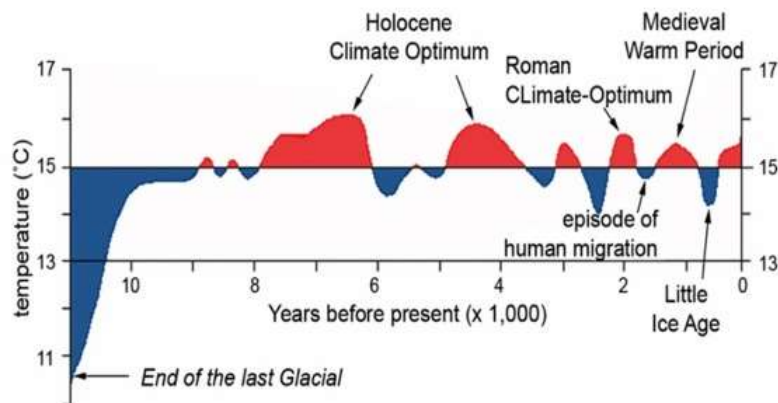

The majority of scientists agree that the increase in CO₂ in the atmosphere is the cause of climate change. Wrong

There is a growing body of scientists that do not agree with this statement. They have been suppressed by the political elite which control the funding of grants and research. If you do not preach the narrative they are ostracized, receive no funding and forced to resign.

These political elite are determined see the demise of Capitalism and are using the CO₂ Hoax to lead the nation and the world towards democratic socialism. In order to do this they have to destroy Capitalism. What better way than to eliminate the one hinge pin that capitalism is based upon, hydrocarbons. In Europe today there are democratic socialist mass parties that are also working to eliminate the use of hydrocarbons.

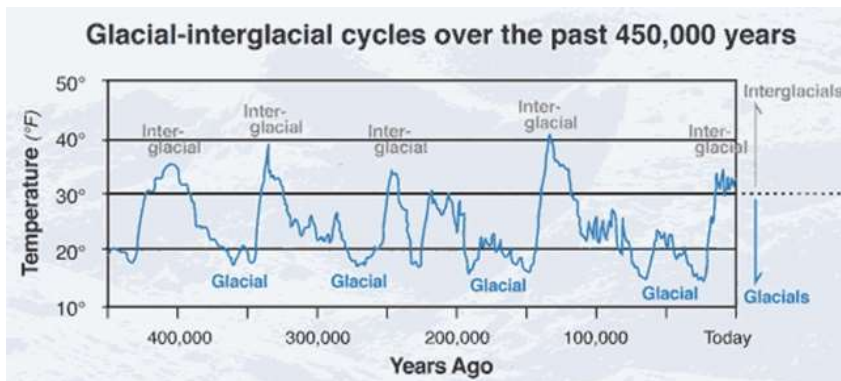

Climate swings of past 12,000 years

Northern Hemispheric temperature reconstruction for the past 10,000+ years

They base this false premise of CO₂ as the cause of global warming by looking at only a short period of the earth's history, 100 years or so. A longer picture of the earth history paints a total different picture. In fact many are now thinking that we are starting into a cooling period even with an increasing level of CO₂.

Once again these political elitist take a short period of earth's history to justify the CO₂ hoax by showing the melting of the glaciers but in fact the earth has gone through many cycles before man ever appeared on earth with higher CO₂ levels.

Yes, we all want a clean environment, but we also want transparency and truth in getting there.
