

## **The Death of the American Experiment**

The "American experiment" refers to the ongoing democratic experiment that began with the founding of the United States of America. It encompasses the ideals and principles upon which the nation was established and continues to evolve. The American experiment is based on the idea of self-government, individual liberty, and the pursuit of happiness.

The United States was founded on the belief that a government should derive its power from the consent of the governed, as expressed in the Declaration of Independence. The American experiment sought to create a system of government that would protect the rights and freedoms of its citizens while allowing for collective decision-making and progress.

Since 2008 the American Experiment has been under threat. It is worth noting that throughout history, the United States has faced significant challenges and periods of turbulence, yet it has also demonstrated resilience and the ability to adapt and progress. The American experiment has shown a capacity for self-correction and evolution, as evidenced by social movements, legislative reforms, and shifts in public opinion.

However, like any nation, the United States faces ongoing challenges and debates regarding issues such as political polarization, social divisions, economic inequality, and the proper role of government. These challenges, combined with external factors and global dynamics, can shape the trajectory of the American experiment.

The longevity and success of the American experiment ultimately depend on the collective efforts and engagement of its citizens, the strength of its institutions, and the ability to address internal and external challenges effectively. The future of the American experiment will be determined by the actions and choices made by individuals, communities, and the nation as a whole.

A strong middle class is often seen as an essential component of American Dream, a healthy and thriving society, as it can help to promote economic growth, social stability, and a sense of shared prosperity. When people have access to good jobs, decent wages, and opportunities for advancement, they are more likely to feel secure and optimistic about their future, which can help to drive innovation and entrepreneurship.

Starting in 2020 forces have aligned to destroy the middle class and replace the American Dream with a Chinese form of medieval society divided into distinct social classes, which are primarily based on one's occupation or role in society but with two classes, the nobility, (the progressive elite), and the commoners or peasants (us).

The Progressive elite would control the reins of government and industry. They consider themselves responsible for governing the country and protecting their subjects. In exchange for their services, they would receive privileges and rights, such as exemption from certain taxes and be free from certain laws.

The commoners, or peasants, (the middle class and the poor), will make up the vast majority of the population. Overall, this return to medieval society will be highly stratified and hierarchical, with limited social mobility between classes.

Ultimately, an educated middle class stands in the way of this transformation and must be destroyed as a strong middle class provides the bedrock and a positive force in promoting the American Dream.

Whether by conspiracy or as a result of the perfect storm the results are the same. What seems like chaos is really an attack on the middle class and the development of a peasant class dependent on the central government to survive.

Why else would there be open borders where millions of poor illegal aliens are allowed into the country?

Why else would the public education system be systematically destroyed?

Why else would we allow the unrestricted flow of drugs across our borders?

Why else would we place the criminal element over the citizen?

Why else would we be promoting race and gender conflicts?

Why else would we be using government agencies to eliminate opposition?

The Coronavirus gave the progressive elite the opportunity to accelerate the process by shutting down the country making the population more dependent on the central government, of which they control, while selecting the winners and losers.

Under the umbrella of climate change, there are unrestricted controls on every aspect of life, from gas stoves to what car you can drive, concentrating the power in the central government. Opposition is restricted though the press controlled by the progressive elite.

The American experiment is characterized by several key elements, including a written constitution that defines the powers and limitations of the government, a separation of powers between the executive, legislative, and judicial branches, a commitment to the rule of law, and the protection of individual rights and liberties. These elements provide a framework for democratic governance, ensuring a system of checks and balances that aims to prevent the concentration of power and safeguard against abuses.

For this transformation to take place this contract with the people must be abridged. This can only happen if the people let it happen.

The American Dream is a concept that refers to the belief that anyone in the United States, regardless of their background, can achieve success and upward mobility through hard work and determination. A strong educated middle class contributes to the realization of this dream; however, the American Dream is not solely about achieving a certain level of economic success. It also encompasses the ideals of individual freedom, opportunity, and self-determination, which can be pursued regardless of one's socioeconomic status. In fact, many successful people in the United States have come from humble beginnings or faced significant obstacles in their pursuit of success.

The American Dream is a term used to describe the belief that, through hard work and determination, anyone can achieve success and prosperity in the United States. It typically involves the idea that individuals from any background or social class can attain upward mobility, financial security, and a better life for themselves and their families.

In 2016 a populist president was elected that went against the expectations of the political establishment of both parties. His election was seen as a populist movement, as he campaigned on a platform that appealed to many working-class Americans who felt disconnected from the political establishment. The establishment viewed him as a disruptor of the political establishment and criticized his policies.

As a result, for the next four years of his administration, the political establishment sought to remove him from office through the political impeachment process whose outcome was influenced by partisan divisions and what turned out to be false accusations.

This continuing assault had a profound effect on the 2020 elections where a pandemic exhausted nation wanted a return to normalcy. Unfortunately, normalcy turned out to be an acceleration of the drive to eliminating the American Dream.

In 2024 the nation will be at the crossroads. Will we continue to completely change America reverting back to a form of medieval society divided into distinct social classes or will we correct our course and continue the American Experiment.
